## EPILEPSY WARNING

Please read before using any video game or allowing your children to use it. Some people are liable to have an epileptic seizure or loss of consciousness when exposed to flashing lights or certain normal conditions of everyday life. Such persons could risk a seizure while watching televised images or while playing certain video games, and this can occur even if there have been no previous medical problems or experience of epilepsy.

If you or a member of your family has ever shown epileptic symptoms (seizure or loss of consciousness) when exposed to flickering lights, consult your doctor before playing.

Parents should supervise their children's use of video games. If you or your children experience any of the following symptoms – dizziness, altered vision, eye or muscle twitches, loss of consciousness, disorientation, involuntary movements or convulsion – discontinue use immediately and consult your doctor.

Please take the following precautions when playing video games

Do not sit too close to the television screen, position yourself with the linking cable at full stretch. Play video games preferably on a small screen. Do not play if you are tired or have not had much sleep. Make sure that the room in which you are playing is well lit. Rest for 10-15 minutes per hour while playing video games.

## WHAT TO DO IF YOU HAVE A DEFECTIVE CD

Should you have a defective CD, please return the CD only (keep all other parts of the game) to our Customer Support Department, along with note describing the problem you have encountered. A replacement CD will be provided upon our receipt of the defective CD. Always make sure to include your name, address, and daytime telephone number with any correspondence.

## QUESTIONS OR PROBLEMS

If you have difficulties with this game and cannot find the solution in this booklet, please call our Technical Support Line at (44) 01344 409399 10am – 5pm Monday through Friday, and a member of our support staff will assist you. We will be best able to help you if you are at your computer when you call.

You can also obtain customer service online. We can be reached as follows:

**Email:** [techsupport@imagicgames.co.uk](mailto:techsupport@imagicgames.co.uk)

**Web:** <http://www.imagicgames.co.uk>

## SYSTEM REQUIREMENTS

You'll need:

- Pentium 133
- 24 MB RAM
- 2MB graphics card
- 4x CD-ROM drive
- Windows 95
- Mouse (Microsoft compatible)
- DirectX 5.0 or higher
- 85 MB free hard disk space

OK, let's install the program! It's easy, but first take off your sword and lay down that shield! How do you think you're gonna use your keyboard if your sword hilt's in your ear and the reflection on your screen shows a shield with two arms sticking out at the sides? So, switch on your computer and start Windows 95. Now insert the CD-ROM into your drive. *Knights and Merchants* uses the Windows 95 Autoplay feature, so right away you'll see a Start menu with several options. Click Install to start the installation program.

## THE INSTALLATION PROGRAM

First you have to decide in which directory you want the game to be. If you want to use the default C:\I-Magic\KnightsAndMerchants, click Continue. If you want to use another directory, just click Search. Here you can manually enter your chosen path and drive using Path, or choose an existing directory from the Directory list. You can change the drive using Drive. Please note that *Knights and Merchants* needs 85 MB of free hard disk space.

# Installation

When you've chosen a suitable directory, click OK, then Continue.

Now select the folder name for the Windows Start menu. The default folder is called Knights and Merchants, as you would expect. If you want to use another folder name, change it in the corresponding window or select another folder from the list below. Then click Continue to start copying installation data. You can stop the process whenever you want by clicking Cancel. When it's done, just click Finish.

An installed version of DirectX 5.0 or higher is also necessary. If you've recently installed other new games on your PC, it's probably on your PC already. If you're not sure, click Install DirectX in the CD Autostart menu and follow the instructions on screen.

# The Story

Ah, the new herald of our king honours my humble abode with his presence. Pray be seated, good sir. Methinks in my writing desk lieth a bottle of excellent brandy which hath been saved for quite such an occasion as this. The war hath lasted many years now, and 'twould seem that the rebels continue to be blessed with success. Sadly, the first-born son of our king is the leader of these scoundrels.

Indeed, might thou ask, how so could this affair last so long? Verily, 'tis a long and sorry tale.

King Karolus reigned undisputed for many a year, and was in troth loved as much by the people as by his own vassals. So just were his laws and wise his rule that his loyal subjects knew not hunger nor worry. Mayhap in the beginning some were unhappy, and, indeed, some baron or other perforce rebelled, wishing to gain the crown for himself. But King Karolus stopped these few afore they could grow strong, and these serpents learned in troth that Karolus was not one to be taken lightly, but was rather of iron will and courage.

# The Story

He answered his enemies with fire and sword, until nary a one was left who would dispute his right to reign. Verily, the land was blessed with peace so that trade and crafts blossomed as never afore.

When a new successor to the throne was born, all seemed well indeed. Howsoever, bad omens brought darkness and foreboding at the hour of Prince Lothar's birth, forcing their Majesties to speedily obtain a soothsaying for the young prince. No less a personage than the renowned learned scholar and teacher, Johann von Moorbach, consulted the stars concerning the destiny of the future king.

This wise scholar prophesied a future full of promise for the child. Nary a one would be his equal; he would be a tower of strength in battle and would win many victories. His name alone would fill the hearts of his enemies with terror.

Prince Lothar had as his teachers the best scholars in the kingdom, and in troth was a willing pupil. In matters of war he had especial talents, whether 'twas bare fisticuffs, the sword or as leader on the training battleground. His tactical wiles were first put to the test against the uncivilised barbarians in the far north. These savages oft-times challenged the borders of our kingdom with impunity.

But now it came to pass that a rift slowly grew 'twixt father and son. No one at that time could have foretold that the dark clouds of impending doom were perforce gathering over the kingdom. Prince Lothar was a dutiful son, the pride of his parents and an honourable knight without fear or blemish. Hardly had the young prince escaped the shackles of boyhood, when his father commanded him to govern a small province. I also spoke on his behalf in this matter, albeit unassuming and in all humility. The king, in his wisdom, wished perchance to give his son practical experience in using what he had learned from his books and

# The Story

teachers. 'Twas no surprise when the prince indeed mastered this task with customary ease.

In two years, the young Prince Regent took this sleepy place and made out of it a flourishing town and the most important of trading centres. Abundant harvests and intensive exploitation of raw materials brought riches to his seat of rule, and the result was that he was indeed able to support and succor a large force of militia, which maintained law and order. The prince also commanded that a palace be built wherein he entertained numerous young knights. The finest victuals were served on plates of gold, the best of the wines of the South flowed freely and his noble followers were amused by clowns, players, and dancers.

Complete harmony and peace reigned over his land, and the bellicose youth began to tire of his less than active life. His followers, although feted by hunts, jousts, and military practice, became restless as well, their fiery characters craving more excitement. More and more were the knights of the prince becoming involved in disputes with the mercenaries of the neighbouring provinces. On one such occasion a man was killed and a mill put to the torch. Many witnesses stated that the knights were in troth at fault in this dastardly deed, and Baron Gottfried, being the regent of the miller and the dead mercenary, perforce brought charges before the king against these wicked knights.

With sorrow in his heart, but without hesitation, King Karolus passed judgment on the scoundrels: death by hanging! A horsed emissary was dispatched to bring the ruling, with the king's seal, to the prince. Verily, the emissary was never to see the capital again, and my investigations into the matter showed that this man supposedly never reached Prince Lothar's province. Thou knowest that such emissaries are under the personal protection of the king himself, and the king was deeply angered by this foul deed perpetrated on

# The Story

his loyal subject. He thereupon bade thy predecessor, Hilpert von Rodgau, a fine king's herald and true, to carry a second decree of judgment to the prince. The king gave Hilpert a half troop of his own finest bodyguard to ensure that justice would prevail in this matter.

Prince Lothar treated the king's herald with much discourtesy, and Hilpert waited many days for an audience. This so sorely tried the patience of the good Herr von Rodgau that he, flanked by the king's bodyguards, forced his way into the prince's presence. Enraged by this violation of order in his household, he ignored the commands of his king and father, refusing to hang the rogue knights. The calm and prudence of the old herald has now become legend and, in troth, Hilpert used all his wiles to convince the prince of his folly. The prince did not only turn a deaf ear to the herald's pleadings, but increased the gravity of the matter by even insulting that worthy old man, whereupon the king's retinue departed for the capital to carry to the king the sorry tidings of his son's scorn for the royal oath of duty and faith the crown.

Upon hearing the news, our king likened indeed to a man struck down. Many hours did he consult with the herald and my own humble personage, 'til at last, sore at heart, he judged that his son should be removed from his post of governor of that province. Yet again was an emissary dispatched to the prince, only to return a few days later with the answer; Prinz Lothar refused to give up his privileges and would never leave his new home! Verily, now was the king beside himself with rage, and dispatched an army against his rebel son, to force the prince through military might to adhere to his oath of allegiance.

# The Story

The prince had meanwhile gathered around him a large army of his own, which indeed taught the king's forces a lesson in military tactics. The king's general, defeated by a provincial army, returned to the capital. With countenance reddened with anger and trembling voice, the king declared his son an outcast and forthwith an enemy of the realm. The prince had meanwhile gathered around him a large army of his own, which indeed taught the king's forces a lesson in military tactics. The king's general, defeated by a provincial army, returned to the capital. With countenance reddened with anger and trembling voice, the king declared his son an outcast and forthwith an enemy of the realm.

# The Story

With the first blow of the sword in that province, civil war had spread its dark wings over our land, and many barons joined the rebel prince, hoping to gain rich rewards and new lands. Verily, the following years were full of woe for those who remained true to the king. The prophecies of the scholar and teacher, Johann von Moorbach, had indeed proven to be true, but 'twas Prince Lothar's own countrymen who fell into a state of terror and panic at the mere mention of his name. Those whom the Grim Reaper did not harvest through the cruelties of war or the plundering of the mercenaries were laid low by the plague or starvation. Good Herald, thou hast now afore thee an eminently difficult task. Here is the last remaining place of refuge, no further retreat can be countenanced, and no mercy can we expect from our enemies.

But be not too impetuous in thy haste to meet the enemy, oh honourable Herald! Afore thou goest headlong into battle, I would doth suggest to thee that a ride through this land which still remains to us would mayhap be of great benefit to thee. Of a surety, 'twould interest thee much to learn more about the trading practices and ways of our ordinary people.

# Gameplay Information

At the start of the game, you see the hub of your town on-screen: your storehouse. Generally, a left click on a building or person displays information about that building or person in the lower part of the control panel. Use this technique to inventory the stores your king has made available to you for constructing your settlement.

To establish an efficient economy and bring your town to life, you must first order a schoolhouse built. To do this, click the Hammer symbol or press 1 on your keyboard (see Short Cuts) to activate the Building Construction Menu. An Overview window displays all construction orders as symbols. If you move your cursor over a building symbol, a description of that building appears on the lower edge of your screen. Click the Book symbol (the second in the upper row) and move your cursor around the countryside. On a suitable site (see the section entitled "Building Construction Menu"), left click to select that site for construction. One of your labourers starts to level the land.

For your serfs to transport the necessary materials (six boards and five stones in this example) to your construction site, you need a road to the storehouse. To create a road you must highlight the road's position while you are in the activated Building Construction Menu. Labourers immediately start to level the ground where the road will be. Each road section needs one stone, which your labourers must fetch.

When the road is finished, serfs hurry to transport building materials to the construction site. Then schoolhouse construction can begin. When the schoolhouse is finished, build an inn for feeding the populace. Make sure you always have enough wood and stone in your storehouse. The other steps for establishing a functioning economy are explained in the mission training book (Tutorial). There is also a useful "Tips & Tricks" section at the end of this manual.

# The Menus

## BUILDING CONSTRUCTION MENU

Symbol: Hammer

Key: 1

In this menu you can see currently available. When you start playing the game, only a few building options are available to you, because some buildings are dependent on one another (see the section entitled "Buildings"). For example, you can construct a sawmill only if you already have a woodcutter's hut to supply your sawmill with wood. When you select a type of building construction, the raw materials needed (for

example, timber and stones) are displayed. After you highlight a construction site with a left-click, the selection jumps automatically to road construction. You must then connect your site by road to your storehouse so that the building materials can be delivered to your construction site.

When selecting a site, note the blue border of your future building. Red crosses on or within the border indicate an unsuitable site. And always watch where you place the building entrance: it must connect to your road.

# The Menus

Fields and vineyards can be sited only on fertile land, so check the surrounding area for productive fields. However, you can build a house on barren ground.

Mine construction has special requirements. When you think you've found a good mine site, check again to make sure there are plenty of raw materials on hand. Iron and gold mines are driven into the mountain, whereas coal mines are placed directly over the coal seam.

To remove highlighting or demolish finished buildings, select the upper right X symbol.

You can close the Building Construction Menu whenever you want by right-clicking or pressing the Escape key.

# The Menus

## DISTRIBUTION OF WARES MENU

Symbol: Scales

Key: 2

Here you can set your priorities for supplying buildings with four main raw materials: iron, coal, timber, and wheat. For example, your choices here let you ensure that the weapon smithy—in case of under-production—gets most of the iron produced.

But be careful! You should always have enough wheat for your mill and stables.

## STATISTICS MENU

Symbol: Abacus  
(Middle Ages calculator)

Key: 3

Here you can see the number of available buildings. The number tells you how many finished production centres of a particular kind you have. The right column displays the number of serfs whose training has been completed, the occupation corresponding to the buildings in the same line. If you don't have enough trained personnel available, a message is displayed.

Keep your eye on the number on the lower right side. It tells you how many labourers, serfs, and other personnel you have. Having

enough personnel is a vital factor in the smooth, organised, and trouble-free running of your whole economic system. As you gain game experience, you'll learn the optimum number.

# The Menus

In the Settings submenu, you can select Autosave, which automatically saves the game every three minutes. The game is saved into the 10th save slot. When you select Fast Scrolling, you double the scrolling speed.

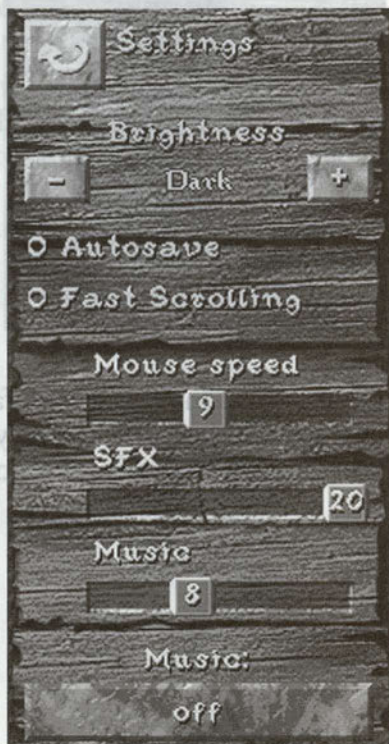

The three sliders change the cursor speed, sound volume, and music volume.

## OPTIONS MENU

Symbol: Feather

Key: 4

Here you can save and load your game, and play your favorite music on the CD player.

# The Storehouse

The central hub of your trading and commercial system is the storehouse. All items manufactured in your production centres are transported to this building by your serfs.

It's useful to keep supplies of gold, weapons, and food in your storehouse. These supplies help you construct your towns. In small villages or settlements, one storehouse is enough, but the larger your settlement becomes, the more advantageous it is to build specialised storehouses (for example, for storing only raw materials or only food).

If you click once on a storehouse with your Magnifying Glass cursor, the contents of the storehouse are displayed on-screen. Each item has its own icon. You can deliver other items to your storehouse with a simple click on the item you select. A red arrow in the icon corner indicates that from now on you can have that item transported away from the storehouse, but no more deliveries of the item to your storehouse will be carried out. You can cancel this delivery block at any time by left-clicking on the particular icon.

# The Schoolhouse

Your new labourers and other personnel are trained in the schoolhouse. It costs one gold chest to train one person. Make sure you have enough gold on hand in your store-house for forming and training new units. If you need a lot of military units, build a lot of schoolhouses to speed up the learning process. If you build your schoolhouse near your metallurgy shop, you will help speed the delivery of gold.

You can put up to five units (persons) with different occupations into a "queue," and these units will be trained one after another. To do this, click the arrow on the lower edge of the interface bar. The unit/occupation is displayed. Click until you see the one you want displayed in middle screen over the arrow buttons. Now click on the Equip button directly underneath. Each click moves another subject (with the occupation you selected) into the queue. The Status bar directly above the queue tells you what stage the current unit's training has reached. To the left of the Status bar is a button that cancels the current training in progress. If you want to cancel the training for one unit in the queue, just click the corresponding point in the queue. When you've progressed a bit in the game, you'll find you mostly need serfs and recruits. That's why the Middle Ages powers-that-be breathed extra special magic qualities into these arrow symbols! A right click on the arrow pointing left places you at the start of the queue (serfs), and a right click on the arrow pointing right puts you at the end of the occupation list (recruits). You can also tell what stage the training has reached by looking at the big schoolhouse clock.

# The Inn

Vineyard

## RELATED BUILDINGS

None

## CONSTRUCTION

### COSTS

 Wood x 6

 Bricks x 5

The commoners must be supplied with food. They go independently to the inn to get a square meal. Of course, the inn must always be busy, otherwise the king's good subjects would starve! The inn must be constructed in the town centre, enabling every citizen to reach it quickly. Outlying settlements should have their own inns.

Soldiers don't visit the inn, but are supplied with food and drink on location, at your command.

Sawmill

## CONSTRUCTION

### COSTS

Wood x 3

Bricks x 2

The woodcutter fells trees for the sawmill in the deep woods of the countryside. After he's felled all available trees, he turns his attention to reforestation. However, if you only need to clear the trees to make room for town construction, then you should dismantle the woodcutter's hut after the trees have been cut down and cleared.

Try to put the hut near your sawmill to ensure that the felled trees are processed quickly and efficiently. Deciduous and evergreen trees are purely for further processing, but your woodcutter won't touch palms or dead trees.

# The Sawmill

## GOODS NEEDED

 Wood x 4

 Bricks x 3

You need a lot of wheat to breed pigs. Each pig must be sufficiently fattened before the animal breeder slaughters it. The butcher gets the meat, and the tannery gets the hide.

The swine farm is vital for the production of leather armour. Meat is important for feeding your population, too. Construct the swine farm near a farm to ensure the steady delivery of wheat.

# The Butcher

## GOODS PRODUCED

Sausage x 3

## INHABITANT

Butcher/Tanner

## BUILDINGS NEEDED

Swine Farm

## RELATED BUILDINGS

Inn

## CONSTRUCTION

### COSTS

Wood x 4

Bricks x 3

The people just love the sausages produced here. The sausages have a high degree of saturation (that means they fill you up!), which makes them the ideal food. If you make sure that your inn gets regular deliveries of these sausages, your people won't go hungry.

To make three sausages, the butcher needs one pig, which is bred at the swine farm. Place your inn near your butcher to ensure swift delivery of the meat.

# The Tannery

## GOODS NEEDED

Skins

## GOODS PRODUCED

Leather Roll x 2

## INHABITANT

Butcher/Tanner

## BUILDINGS NEEDED

Swine Farm

## RELATED BUILDINGS

Armoury Workshop

## CONSTRUCTION

### COSTS

Wood x 4

Bricks x 3

Leather armour production is necessary for equipping axe fighters, bowmen, lance carriers, and scouts.

The tannery receives hides from the swine farm and processes them into leather. The butcher, who doubles as tanner, produces two rolls of leather from one pigskin. These rolls are then delivered to the armoury workshop for further processing. The tannery should be as near as possible to the armoury workshop.

# The Stables

## GOODS NEEDED

Wheat

## GOODS PRODUCED

Horses

## INHABITANT

Animal Breeder

## BUILDINGS NEEDED

Farm

## RELATED BUILDINGS

Barracks

## CONSTRUCTION

### COSTS

Wood x 6

Bricks x 5

Like the swine farm, the stables need a lot of wheat to feed the growing horses. The animal breeder feeds each horse roughly four units of wheat until the horse has grown enough to be sent for cavalry duty. Have a farm near your stable to guarantee the steady supply of wheat.

When the horses have reached the correct size and weight, they are taken to the barracks, where they wait for riders. If you need a lot of scouts and knights, it makes sense to have several stables, enabling you to breed a greater number of horses more quickly.

# The Weapons Workshop

## GOODS NEEDED

## GOODS PRODUCED

## INHABITANT

Carpenter

## BUILDINGS NEEDED

Sawmill

## RELATED BUILDINGS

Barracks

## CONSTRUCTION

### COSTS

The weapons workshop produces the three lighter weapons: the hand axe, the bow, and the lance. It costs two wooden boards to make one of these weapons. To produce large quantities of weapons, a great deal of wood is needed. To enable the workshop to keep production flowing, you need two sawmills.

The carpenter works to your commands, turning out different weapons each time. The weapons manufactured here are placed at the disposal of the recruits in the barracks. If you need to construct several weapons workshops, make sure you have plenty of wood stored.

# The Armoury Workshop

## GOODS NEEDED

## GOODS PRODUCED

 Leather Armour

 Wooden Shield

## INHABITANT

Carpenter

## BUILDINGS NEEDED

Sawmill

Tannery

## RELATED BUILDINGS

Barracks

## CONSTRUCTION

### COSTS

 Wood x 4

 Bricks x 3

Leather armour and wooden shields are produced for your soldiers here. One roll of leather makes one suit of leather armour, and one timber board makes one wooden shield. You must personally order the goods so that your carpenter knows what to produce next.

This workshop should be near the barracks, to enable effective and speedy armour delivery.

The axe fighters, lance carriers, bowmen, and scouts all need leather armour for their training. The axe fighters and the scouts need the wooden shields.

# The Coal Mine

## GOODS NEEDED

None

## GOODS PRODUCED

Coal

## INHABITANT

Miner

## BUILDINGS NEEDED

None

## RELATED BUILDINGS

Metallurgy Shop

Iron Smithy

## CONSTRUCTION

### COSTS

Wood x 3

Bricks x 2

Many buildings depend on coal extracted from deep mines. You need a lot of coal for gold and steel manufacture. The smithies also need coal for their product manufacture and processing. Try to construct several mines as speedily as possible to meet the demand for coal. As a rule of thumb, you need one mine for every building that requires coal. If a coal mine's vein becomes exhausted, a message is displayed.

# The Iron Mine

## GOODS NEEDED

## RELATED BUILDINGS

Metallurgy Shop

## CONSTRUCTION

### COSTS

Wood x 3

Bricks x 2

The training of new serfs is financed by gold chests. Gold also pays for the recruitment of new soldiers. The gold mine extracts the gold ore out of hillsides containing gold veins. To manufacture gold chests, you need the metallurgy shop, which should be constructed near your mine. After a time, the vein will be exhausted, so you must dismantle your mine and construct it again on the site of a new gold vein.

# The Metallurgy Shop

## GOODS NEEDED

Gold Ore

## GOODS PRODUCED

Wood x 6

Bricks x 6

The barracks is the centre of all your military activity. The recruits who've finished their training in the schoolhouse go directly to the barracks, where they receive weapons, armour, and horses. Depending on what weapons and armour you have stores, you can put together different kinds of units.

Keep an eye on your barracks, watching out for enemy attacks. It's better to have the smithies and workshops near your barracks to speed up deliveries of much-needed armour and weapons.

# About The Watchtower

## CONSTRUCTION COSTS

Wood x 3

Bricks x 2

Construct as many watchtowers as possible. They protect your town from attack. The tower is filled with stones that a recruit hurls down on the enemy. Try to construct these towers near one another, because the recruit has to eat at the inn now and then, leaving the watchtower unattended.

But watch the enemy bowmen! They can reach your tower easily with their arrows, without being endangered themselves.

Wood x 6

Bricks x 6

# About the King's Subjects

## SERFS

A horde of industrious serfs delivers your finished products to the proper buildings. If have too many goods or products in your production centres, order the schoolmaster to instruct more serfs. But to enable the serfs to perform their tasks quickly and efficiently, always connect your individual buildings with roads.

---

## LABOURERS

The labourers construct your roads and buildings. They also construct your cornfields and vineyards. The more labourers you have, the more quickly your town will be constructed.

---

## STONEMASONS

The stonemasons hew large stones from the quarry and process them into building materials needed for house and road construction.

# About the King's Subjects

## WOODCUTTERS

The woodcutters supply the sawmill with wood. They're also responsible for reforesting the areas where they've already felled the trees.

---

## CARPENTERS

Your most versatile servants are the carpenters. They not only manufacture timber, but also work in the weapons workshop and the armoury workshop.

---

## FARMERS

The farmers plant and harvest the corn and take care of the vineyard.

---

## BAKERS

The bakers work in the bakery and the mill. Their products help nourish the populace.

# About the King's Subjects

## ANIMAL BREEDERS

The animal breeders are in the swine farm and the stables. They feed corn to your pigs and horses until the pigs are ready for slaughter and the horses are ready for your cavalry.

---

## BUTCHERS

The butchers work in two locations: the tannery and (of course) the butcher shop. They supply you with leather and sausages.

---

## METALLURGISTS

The metallurgists are found in the metallurgy shop and the iron smithy. They supply you with gold and steel, but only if they have enough raw material on hand for their smelters.

---

## BLACKSMITHS

The blacksmiths manufacture your heavy weapons and armour, using a lot of coal in the process.

# About the King's Subjects

## MINERS

The miners are responsible for supplying you with gold ore, iron ore, and coal.

---

## RECRUITS

The raw recruits come out of the barracks as brave soldiers, ready to do your every bidding. The soldiers protect and expand the kingdom. But it's the recruits who have the often boring job of manning the watchtowers and hurling stones down upon the enemy should they try a sneak attack. In case of imminent war, try to build a lot of schoolhouses to train recruits.

# The Troops

## MILITIA

Equipment needed

Attack  
35%

Armour  
0%

## AXE FIGHTER

Equipment needed

Attack  
35%

Armour  
50%

## SWORD FIGHTER

Equipment needed

Attack  
55%

Armour  
70%

You can put the infantry (militia), the axe fighters, and the sword fighters into battle against all enemy units.

Worth mentioning at this point is the storm attack, which can be carried out by these soldiers only. The soldiers race up to the enemy to get into the fray as quickly as possible. When they attack enemy bowmen and crossbowmen by storm, their risk of injury is much less than usual because they're harder to hit while going at that speed.

Your infantry can protect your cavalry from enemy lance carriers and can protect your long-range weapons from enemy infantry. However, the militia is the weakest infantry unit. Send them into battle only when you have urgent defense problems or when you have too much gold in your storehouse.

# The Troops

## SCOUT

### Equipment needed

Attack  
35%

Armour  
50%

Axe fighters need a suit of leather armour, a wooden shield, and a hand axe. Because sword fighters need other equipment, namely a suit of iron armour, an iron shield, and sword, you can equip these two fighters together.

## KNIGHT

### Equipment needed

Attack  
55%

Armour  
70%

The cavalry is the fastest unit in the field and is therefore great for scouting forays and surprise attacks. Long-range enemy fighters can be reached quickly by these scouts and knights, and they don't usually have too many casualties among themselves.

## LANCER

### Equipment needed

Attack  
25%

Armour  
50%

Cavalry  
+55%

Scouts are equipped with a hand axe, a suit of leather armour, and a wooden shield, while knights wear a suit of iron armour and fight with iron swords and shields. Both ride on horses.

The lance carriers are the ultimate protection against enemy cavalry.

# The Troops

## PIKEMAN

### Equipment needed

Attack

Armour

35%

70%

Cavalry

+80%

With their long lances, they knock enemy riders out of their saddles. Lance carriers need a suit of leather armour and a lance.

Pikemen wear a suit of metal armour and, of course, carry a pike. Because they can't match the speed of the cavalry, their main function is defense. The only time they directly attack the enemy is when defending their own cavalry against opposing cavalry.

## BOWMAN

### Equipment needed

Attack

Armour

35%

50%

Your long-range weapons are the most important tactical element in battle. Bowmen and crossbowmen can attack the enemy from a safe distance without suffering casualties themselves. But don't let them get involved in the hand-to-hand stuff! Protect them with other troops.

## CROSSBOWMAN

### Equipment needed

Attack

Armour

100%

70%

Bowmen need a bow and a suit of leather armour, while crossbowmen's equipment consists of a crossbow and iron armour.

# Battle Tactics

During the game, you'll often find yourself in situations that typically lead to battles against your enemy. How you handle your battle tactics decides who comes out on top. To fight effectively, you must choose different tactics for each type of troop. Your troop formation also plays an important role. Here are a few basic ground rules in the war of tactics.

# Battle Tactics

Never let your bowmen and crossbowmen get into hand-to-hand combat. To protect them, always try to stop an advancing enemy with your infantry. Your bowmen and crossbowmen need room to aim and fire, so remember: no close quarters stuff for your long-range weapons!

Attacking your enemy from the rear is a great tactic because the soldier being attacked can't protect himself from the blows raining upon him. You can probably quadruple your hit rate just by attacking from behind.

In the pictures shown here, the lighter armoured axeman, charging from the rear, will win against the more heavily armoured swordsman.

# Common Battle Tactics

The cavalry is the strongest type of unit on the battlefield. Their speed and hit accuracy make them extremely dangerous for enemy long-range fighters and infantry. Only the lance carriers and pikemen with their long weapons are a match for them. So keep your cavalry away from enemy long weapons!

## ATTACK (KEY)

Use this key to attack enemy units and buildings. But don't forget, this your troops are attacking from a low angle, with every soldier trying to reach the enemy independently!

## WHEEL LEFT, WHEEL RIGHT

Use the arrow keys to change the direction of your stationary troops. This way you can approximately determine the targets for your crossbowmen and bowmen.

## STORM ATTACK

A storm attack can be carried out only by the militia, axe fighters, or sword fighters. Use this command when you want to pursue an enemy who is fleeing, or when you want to attack against enemy long-range weapons. But don't forget that you have no control over your units while they're storming the enemy. You can give new commands only when all your units have completed their attack manoeuvres.

# Battle Tactics

The cavalry is the strongest type of warrior on the battlefield. Their speed and hand accuracy make them extremely dangerous for enemy formations. Only the lance carried crossbowmen with room for the weapon and so the cavalry was long-range. Attacking from the rear is a tactic because the soldier being attacked can't protect himself from the rear.

# Commands & Shortcuts

## CONTROLLING YOUR MILITARY UNITS

### SEND (KEY: S)

This key moves your troops. When you've chosen a valid destination, a compass is displayed. When your troops have reached their destination, use the compass to turn your troops in any direction. If you don't use the compass, the current direction is used.

### HALT (KEY: H)

Select this key to halt your troops. They form up exactly where you halted them.

### ATTACK (KEY: A)

Use this key to directly attack enemy troops or buildings. But don't forget that your troops will break formation, with every soldier trying to reach enemy lines independently!

### WHEEL LEFT, WHEEL RIGHT

Use the arrow keys to change the direction of your stationary troops. This way you can approximately determine the targets for your crossbowmen and bowmen.

### STORM ATTACK

A storm attack can be carried out only by the militia, axe fighters, or sword fighters. Use this command when you want to pursue an enemy who is fleeing, or when you want to attack against enemy long-range weapons. But don't forget that you have no control over your units while they're storming the enemy. You can give new commands only when all your units have completed their attack manoeuvres.

# Commands & Shortcuts

## CHANGE FORMATION

These two buttons change your troops' formation. A preview of the new formations is displayed in the middle of each button. Always try to find a tactically clever formation for each troop.

## SEPARATE

This command separates your troops. If you have different units within a troop (for example, militia and axe fighters), two individual units are formed, with one unit consisting of axe fighters and the other made up of militia. If your troop consists of only one classification, they separate and form two fighting groups.

## COMBINE (KEY: V)

This command lets you combine two troops. But the troops must have the same military characteristics. For example, you can't combine long weapons and cavalry, or long-range weapons and infantry. The troop carrying out your command joins up with the other troop you've selected.

## ORDER FOOD

Your troops must be fed regularly. Unlike civilians, soldiers get their food delivered to them. As soon as you give the command, your serfs try to supply each hungry soldier with food from the storehouse. But try to move your troops near the storehouse to help your serfs deliver the food to the soldiers more quickly and efficiently.

# Commands & Shortcuts

## KEYBOARD FUNCTIONS

A	Attack

## SPECIAL KEYS IN MULTIPLAYER MODE

Return Open message window

# The Multiplayer Game

In this mode, you can test your strength against up to five other ruling barons. Whoever manages to utterly destroy all enemy armies, towns, and villages wins the game.

Begin by clicking Start Multiplayer Game in the main menu. Each player is asked to enter a preferred name. When the names have been selected, click Continue.

You are then asked if you want to create a new game or join the current game.

**Important!** Each multiplayer game requires a leader, so players must agree ahead of time who will take on the leader role. The leader creates the new game. The other players then click Join Current Game.

## CREATE NEW GAME ROUND

In the upper window, use your mouse to select the type of connection (that is, IPX for Direct Play, TCP/IP for Direct Play, and so on), then click Create Game. You are first asked to name the game round, and then you see the Game Parameter menu. The game leader is the only one who can select game settings.

Start by selecting your game colours. Click on one of the Not Occupied buttons. Your subjects and buildings now have the same colour as the rectangle beside the selected button. The following choices are also displayed.

# The Multiplayer Game

## POSSESSIONS

Here, you can set different Start Options.

- **Nothing**

Each player starts with a storehouse and a few serfs and labourers.

- **Troops**

Each player receives some additional troops for town defense.

- **Troops and Buildings**

Your town has some buildings already.

## START POSITION

Here, you can enter the distribution of players' positions.

- **Sequence**

The positions, depending on the player's colour, are put on their locations on the map.

- **Random**

The positions are distributed randomly.

## MESSAGES

This window displays messages that players can exchange with one another by using the Send function.

## SEND

Here, use your keyboard to send messages to opposing players. Pressing Enter displays the messages in the Messages window. This function is especially useful for agreeing beforehand on things such as how much raw material should be used, on which map the game should be played, and so on.

# The Multiplayer Game

## DESCRIPTION

This displays the maximum number of players, the size of the map, and the type of scenario (construction or battle) selected.

## SCENARIOS

This is where you select the multiplayer map on which the game will be played. You can get information about the map in the Description window. You can also use this window for multiplayer games already saved. Just select the saved game in the Scenario window and distribute the players to their original positions. The saved game situations are then transmitted to the different PCs. This can take a little time, depending on the capability of the selected type of connection.

When all players are ready and the parameters have been selected, the game leader clicks Start, and the game begins.

The list is updated every so often; the interval between updates depends on the type and quality of the connection. You can speed up the Search process if you click Search for Game. When you've found and selected the game you want, you can enter the Parameter menu for the multiplayer game by clicking Join Game.

To select your game colours, click one of the Not Occupied buttons. Your subjects and buildings now have the same colour as the rectangle beside the selected button. You can influence the other game parameters only indirectly, by using the Send function to send a message to the game leader. And of course you can use the Send button to communicate with the other players.

Generally speaking, when you're in the multiplayer mode, clicking Cancel returns you to the previous menu.

# The Multiplayer Game

The game in this mode differs from Single Player mode in just two respects: messages and alliances.

To send a message to one or more opposing players, click the coach horn on the right lower screen beside the control panel. A window is displayed. Click on the recipient's name and type your message. Press Enter to send the message. Any player(s) not selected won't receive the message.

You can also display the Message window simply by pressing Enter. Incoming messages (just as in Single Player Mode) are displayed on parchment form above the coach horn. If you click one of the parchments, that message is opened, and you can read, close, or destroy it.

## ALLIANCES

The scroll under the coach horn enables you to forge temporary alliances. If only you and your allies are left in the game, you must annul the alliances and then try to defeat the remaining barons or rulers in battle. **There can be only one winner!**

To forge an alliance with a particular player, click on his/her name. From that point on, your troops won't attack that person's troops. To annul the alliance, click again on your ally's name. When you confront other armies, you can easily tell which ones will or won't attack you (under current conditions): look at the "is friendly" or "is hostile" message.

# Questions & Answers

**My serfs keep getting in each other's way. I'm losing a lot of valuable time because of this. What can I do about it?**

A carefully planned network of roads is absolutely vital for a functioning economy. First, you can broaden the roads. The most important buildings in your town should be connected by a main axis that is three fields in breadth. Another way to avoid congestion is to enlarge the squares in front of your most-frequented buildings, such as the storehouse and inn. Having multiple storehouses helps, too.

**My labourers don't seem to bother about completing building construction. They only busy themselves with road construction. Why?**

All labourers have road construction as their main priority, because roads enable the transport of your materials. But try not to simultaneously construct too many roads or roads that are too long. Normally, you should never construct more than two buildings with connecting roads at the same time.

**What are the differences between wine, bread, and sausages in the food supply chain?**

There's a big difference between the needs of the civilian populace and the military. Both have a Status Bar that tells you how they're doing, hungerwise. The serfs and labourers need more food than the military. If a serf eats a sausage, which has a high nutrition value, the Status Bar fills up (like the serf's stomach!). Bread doesn't have quite the filling effect of a sausage, and wine has least of all. This means if you give your serfs only wine to drink, they're gonna be hungry pretty soon!

The military's hunger is easier to satisfy. Just one sausage, loaf, or drink of wine, and their Status Bar fills right up.

# Questions & Answers

## **Is it important to build several storehouse and inns?**

In larger towns, yes. Your people will automatically search out the nearest inn; they won't walk for miles! If you have several storehouses, you can build outposts in which only certain kinds of produce are stored (see the section on Storehouses).

## **My swine and horse breeders aren't being supplied with enough wheat. What can I do?**

You should always have a farm near your swine farm and stables to ensure wheat delivery. If you already have enough wheat on hand, you can go into the Distribution of Products menu and change the priorities of your various production centres (see the section on Game Menus).

## **My farmer needs too much time to work in his fields.**

Try to lay out your wheat fields and vineyards in front of the farmer's door. Then the poor guy won't have to walk miles to get to his fields!

# Tips & Tricks

To gain victory over your opponent, you must destroy all his military troops, storehouses, schoolhouses, and barracks.

Construct two or more quarries right at the start of the game. This gives you enough stones for your buildings and road construction.

Try not to train any more than eight labourers, because they will get in each other's way. Too many cooks spoil the broth! And those extra cooks will be supping the broth as well, for the duration of the game.

If your people are just standing around with nothing to do, stop the training process right away. Your labour force is big enough!

Gold and iron mines play a major role in determining the strength of your military. Try to construct your town near these mines. And out-of-town industrial centres should have a storehouse of their own. Then the serfs don't have such a long distance to walk!

Press the Delete key to quickly close opened messages. When it's troop-feeding time, try to move them near one of your storehouses. This shortens the distance the serfs have to walk to deliver the food to the waiting soldiers.

Try to produce every kind of victual. Then your people can satisfy their hunger pangs any time they want.

Check your food reserves occasionally. If the level is slowly but surely decreasing, it's time to build more production centres for bread, wine, or sausages. Otherwise, starvation threatens!

Always order the right number of matching products from your weapons and armour smithies. For example, order only one longbow per suit of leather armour.

# Tips & Tricks

At the start of the game, send your troops out to scout the area so you can detect enemy troops much earlier.

Large armies need a lot of food! Don't delay your attack too long, or the armies will eat you out of house and home!

# The London Dungeon

Experience the thrill and chills of a terrifying tour through the Dungeon's dark catacombs - but be warned, nothing is quite what it seems and the 'exhibits' have a nasty habit of coming back to life!

Follow in the bloody footsteps of Jack the Ripper, enjoy a grisly date with Madame Guillotine and experience the ultimate trip... being sentenced to death on a terrifying, one-way boat ride to meet your maker!

But that's just the beginning: The Iron Maiden will break your heart, The Beast of Whitechapel will have you in stitches and we're sure you'll be dying to meet Katarina the vampire girl!

The London Dungeon dares you to visit
